### Summary

#### Overall risk level:

Medium

#### Risk ratings:

High:	0
Medium:	1
Low:	4
Info:	12

#### Scan information:

Start time:	2021-04-19 10:13:04 UTC+03
Finish time:	2021-04-19 10:13:32 UTC+03
Scan duration:	28 sec
Tests performed:	17/17
Scan status:	Finished

### Findings

#### 🚩 Communication is not secure

URL	Evidence
http://113.176.69.32:9002/	Communication is made over unsecure, unencrypted HTTP.

▼ Details

#### Risk description:

The communication between the web browser and the server is done using the HTTP protocol, which transmits data unencrypted over the network. Thus, an attacker who manages to intercept the communication at the network level, is able to read and modify the data transmitted (including passwords, secret tokens, credit card information and other sensitive data).

#### Recommendation:

We recommend you to reconfigure the web server to use HTTPS - which encrypts the communication between the web browser and the server.

## Missing security header: Content-Security-Policy

URL	Evidence
<a href="http://113.176.69.32:9002/">http://113.176.69.32:9002/</a>	Response headers do not include the HTTP Content-Security-Policy security header

### Details

#### Risk description:

The Content-Security-Policy (CSP) header activates a protection mechanism implemented in web browsers which prevents exploitation of Cross-Site Scripting vulnerabilities (XSS). If the target application is vulnerable to XSS, lack of this header makes it easily exploitable by attackers.

#### Recommendation:

Configure the Content-Security-Header to be sent with each HTTP response in order to apply the specific policies needed by the application.

Read more about CSP:

[https://cheatsheetseries.owasp.org/cheatsheets/Content\\_Security\\_Policy\\_Cheat\\_Sheet.html](https://cheatsheetseries.owasp.org/cheatsheets/Content_Security_Policy_Cheat_Sheet.html)

<https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Content-Security-Policy>

## Missing security header: X-XSS-Protection

URL	Evidence
<a href="http://113.176.69.32:9002/">http://113.176.69.32:9002/</a>	Response headers do not include the HTTP X-XSS-Protection security header

### Details

#### Risk description:

The **X-XSS-Protection** HTTP header instructs the browser to stop loading web pages when they detect reflected Cross-Site Scripting (XSS) attacks. Lack of this header exposes application users to XSS attacks in case the web application contains such vulnerability.

#### Recommendation:

We recommend setting the X-XSS-Protection header to **X-XSS-Protection: 1; mode=block**.

More information about this issue:

<https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/X-XSS-Protection>

## Missing security header: Referrer-Policy

URL	Evidence
<a href="http://113.176.69.32:9002/">http://113.176.69.32:9002/</a>	Response headers do not include the Referrer-Policy HTTP security header

### Details

#### Risk description:

The Referrer-Policy HTTP header controls how much referrer information the browser will send with each request originated from the current web application.

For instance, if a user visits the web page "http://example.com/pricing/" and it clicks on a link from that page going to e.g. "https://www.google.com", the browser will send to Google the full originating URL in the **Referer** header, assuming the Referrer-Policy header is not set. The originating URL could be considered sensitive information and it could be used for user tracking.

#### Recommendation:

The Referrer-Policy header should be configured on the server side to avoid user tracking and inadvertent information leakage. The value **no-referrer** of this header instructs the browser to omit the Referer header entirely.

Read more:

[https://developer.mozilla.org/en-US/docs/Web/Security/Referer\\_header:\\_privacy\\_and\\_security\\_concerns](https://developer.mozilla.org/en-US/docs/Web/Security/Referer_header:_privacy_and_security_concerns)

## Server software and technology found

Software / Version	Category
 Twitter Bootstrap	Web Frameworks
 Font Awesome	Font Scripts

## ▼ Details

**Risk description:**

An attacker could use this information to mount specific attacks against the identified software type and version.

**Recommendation:**

We recommend you to eliminate the information which permits the identification of software platform, technology, server and operating system: HTTP server headers, HTML meta information, etc.

🚩 Website is accessible.

🚩 Nothing was found for vulnerabilities of server-side software.

🚩 Nothing was found for client access policies.

🚩 Nothing was found for robots.txt file.

🚩 Nothing was found for use of untrusted certificates.

🚩 Nothing was found for domain too loose set for cookies.

🚩 Nothing was found for missing HTTP header - X-Frame-Options.

🚩 Nothing was found for missing HTTP header - Strict-Transport-Security.

🚩 Nothing was found for Secure flag of cookie.

🚩 Nothing was found for directory listing.

🚩 Nothing was found for missing HTTP header - X-Content-Type-Options.

---

🚩 Nothing was found for HttpOnly flag of cookie.

## Scan coverage information
